

NewFields Note

Environmental Forensics Practice

Celebrating 20 Years at NewFields

NewFields Note: Technical information in a condensed, easily digestible format that is intended to promote environmental science education, knowledge transfer, and empowerment ... *one note at a time.*

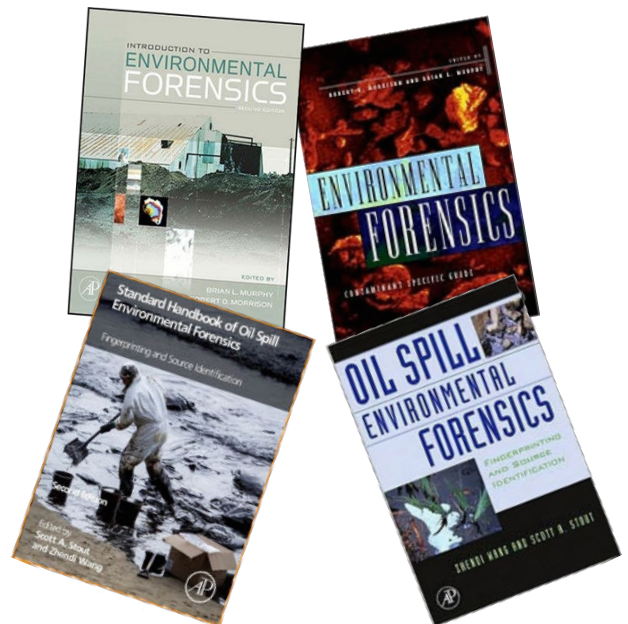

20 Years of Environmental Forensics: In February 2024 NewFields Environmental Forensics Practice celebrated 20 years of providing its clients with premiere consulting in the areas of environmental and analytical chemistry, forensic sciences, and science-focused liability management. When it comes to consulting in environmental sciences—whether it be Superfund Site liability management, dealing with emerging contaminants like PFAS and microplastics, or conducting studies in the wake of petroleum spills to environmentally sensitive land or water bodies—NewFields has the capability and experience to help identify, differentiate, and allocate complicated site- and event-driven contamination.

We would appreciate the opportunity to spend an hour with you and your team so we may share the details of our expertise, present some focused project experiences relevant to your needs, and discover how our capabilities may be of benefit to your projects or cases. We would share a tailored presentation that could touch on our applied expertise in petroleum chemistry, the rapidly changing area of PFAS environmental chemistry, applications of science-based Superfund liability management, forensic microscopy, radioisotopes, micro and macro-plastics, and/or the benefits of large data management/geographic information systems (GIS) supervision of project-specific data.

Please let your NewFields representative know if you have interest in such a presentation. If you are, we will work with you to focus the presentation to your team's specific needs. We look forward to meeting with you, in person or virtually, in the near future.

20 Years of Success:

- Litigation Assistance
- Allocation Support
- Data Management
- Data Review
- Laboratory Support
- Research and Development
- Assisting Clients on a Global Stage
- ASTM Contributions
- Publications
- Book Chapters
